Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

THE SPHINGOLIPIDS ACTIVATOR PROTEINS (COPROTEINS) (BY SIMILARITY).

CHOCTION: SABOSIN A AND SAPOSIN C STIMULATE THE HYDROLYSIS OF GLUCOSYLCERAMIDE BY BETA-GLUCOSYLCERAMIDASE (EC 3.2.1.45) AND GALACTOSYLCERAMIDE BY BETA-GLACOSYLCERAMIDASE (EC 3.2.1.46).

CHOSTIN C APPARENTLY ACTS BY COMBINING WITH THE ENZYME AND ACIDIC LIPPID TO FORM AN ACTIVATED COMPLEX, RATHER THAN BY SOLUBILIZING THE SUBSTRATE (BY SIMILARITY).

CHEBROSIDE SULFATE BY ARYLGULFATASE A (EC 3.1.6.8), GMI GANGLIOSIDES BY BETA-GLACTOSIDASE (EC 3.2.1.23) AND CLOBOTRIAOSYLCERAMIDE BY ALRUPAGALACTOSIDASE A (EC 3.2.1.22).

SAPOSIN-B FORMS A SOLUBILIZING COMPLEX WITH THE SUBSTRATES OF THE SHINGOLIPID HYDROLASES (BY SIMILARITY).

CHOBOTRIAOSYLCERAMIDE BY ALRUPAGALACTOSIDASE A (EC 3.2.1.22).

SAPOSIN-B FORMS A SOLUBILIZING COMPLEX WITH THE SUBSTRATES OF THE SHINGOLIPID HYDROLASES (BY SIMILARITY).

CHOSTIN SAPOSIN D IS A PRECIFIC SPHINGOMYELIN PHOSPHODIESTERASE ACTIVATOR (EC 3.1.4.12) (BY SIMILARITY).

CHOSTIN THIS PRECURSOR IS PROTEOLYTICALLY PROCESSED TO 4 SWALL PEPTING HYDROLASE ACTIVATOR PROTEONS (BY SIMILARITY).

CHOSTIN THIS PRECURSOR IS PROTEONS (BY SIMILARITY).

CHOSTIN THIS PRECURSOR IS PROTEONS (BY SIMILARITY).

CHOSTIN THIS SHALL AND AND ARE SPHINGOLIPID PROTEOLYTICALLY PROCESSED TO 4 SWALL PETINGS (WHICH ARE SIMILARITY).

CHOSTIN THE STANDARINS SAPOSIN A TYPE DOMAINS.

CHOSTIN THE STANDARITY: CONTAINS 4 SAPOSIN B-TYPE DOMAINS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 POTENTIAL.

Sequence 99, Application US/08308865
Patent No. 5877397
GENERAL INFORMATION:
APPLICANT: Lonberg, Nils
APPLICANT: Kay, Robert M.
TITLE OF INVENTION: Transgenic No. 5877397-Human Animals for TITLE OF INVENTION: Producing Heterologous Antibodies
NUMBER OF SEQUENCES: 150
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 296, Application US/09042353

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

C;Function:
A;Description: Saposins bind sphingolipids, form hydrophilic complexes and make them A;Pathway: sphingolipid catabolism
A;Desthway: sphingolipid catabolism
A;Note: saposins A and C (SAP-2) activate hydrolysis of galactocarebroside by beta-gluc A;Note: saposin B (SAP-1) activates hydrolysis of sphingomyelin by sphingomyelin by aryls A;Note: saposin D activates hydrolysis of sphingomyelin by sphingomyelin phosphodiest C;Superfamily: saposin; saposin repeat homology
C;Keywords: alternative splicing; glycoprotein; lysosomal storage disease; lysosome; F;1-16/Domain: signal sequence #status predicted <SIG>F;1-16/Domain: saposin repeat homology <SAPI>F;1-16/Domain: saposin repeat homology <SAPI>F;1-18/Domain: saposin pepat homology <SAPI>F;1-18/Domain: saposin repeat homology <SAPI>F;1-18/Domain: saposin pepat homology <SAPI>F;1-18/Domain: saposin pepat homology <SAPI>F;1-18/Domain: saposin pepat homology <SAPI>F;1-18/Domain: saposin repeat homology <SAPI>F;1-18/Domain: saposin pepat homology <SAPIDIA (SAPIDIA) (SAPIDI

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               hypothetical protein C07G3.4 - Caenorhabditis elegans
C;Species: Caenorhabditis elegans
C;Species: Caenorhabditis elegans
C;Date: 29-Oct-1999 #sequence_revision 29-Oct-1999 #text_change 29-Oct-1999
C;Accession: T31757
R;Geisel, C.; Wamsley, P.
Submitted to the EMBL Data Library, July 1997
A;Description: The sequence of C. elegans cosmid C07G3.
A;Reference number: 221080
A;Accession: T31757
A;Status: preliminary; translated from GB/EMBL/DDBJ
A;Molecule type: DNA
A;Molecule type: DNA

late embryogenesis abundant M17 protein [imported] - Arabidopsis thaliana

Best Local Similarity

Ŋ

```
A.Accession: B94233

A.Molecule type: mRNA

A.Residues: 1-269,463-802>

A.Fexperimental source: cerebral cortex

A.Note: only a part of the protein translation is given; none of the nucleotide seque

R.Kurtenbach, E.; Curtis, CA.M.; Pedder, E.K.; Aitken, A.; Harris, A.C.M.; Hulme, E.

J. Biol. Chem. 265, 13702-13708, 1990

A.Title: Muscarinic acetylcholine receptors. Peptide sequencing identifies residues i

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

"Cultured neurons from mouse brain reproduce the muscarinic receptor
profile of their tissue of origin.";
Eur. J. Neurosci. 6:1691-1701(1994).
-!- FUNCTION: THE MUSCARINIC ACETYLCHOLINE RECEPTOR MEDIATES VARIOUS
CELLULAR RESPONSES, INCLUDING INHIBITION OF ADENYLATE CYCLASE,
BREAKDOWN OF PHOSPHOLINOSTIDES & MODULATION OF POTASSIUM CHANNELS
THROUGH THE ACTION OF G PROTEINS. PRIMARY TRANSDUCING EFFECT IS PI

"Role of conserved threonine and tyrosine residues in acetylcholine
binding and muscarinic receptor activation. A study with m3
muscarinic receptor point mutants.";

J. Biol. Chem. 267:19313-19319(1992).

-! FUNCTION: THE MUSCARINIC ACETYLCHOLINE RECEPTOR MEDIATES VARIOUS
CELLUIAR RESPONSES, INCLUDING INHIBITION OF ADENYLATE CYCLASE,
BREAKDOWN OF PHOSPHOINOSITIES. & MODULATION OF POTASSIUM CHANNELS
THROUGH THE ACTION OF G PROTEINS. PRIMARY TRANSDUCING EFFECT IS PI
                                                                                                                                                                                                                                                      -!- SUBCELLULAR LOCATION: Integral membrane protein.
-!- SIMILARITY: BELONGS TO FAMILY 1 OF G-PROTEIN COUPLED RECEPTORS.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Pfam: Provoct,

Mutat. 4:233-242(1994).

-!- FUNCTION: The lysosomal degradation of sphingolipids takes place by the sequential action of specific hydrolases. Some of these enzymes require specific low-molecular mass, non-enzymic proteins: the sphingolipids activator proteins (coprofeins).

-!- FUNCTION: Saposin A and saposin C stimulate the hydrolysis of glucosylceramide by beta-glucosylceramides (EC 3.2.1.45) and galactosylceramide by beta-glacosylceramidase (EC 3.2.1.46). Saposin C apparently acts by combining with the enzyme and acidic lipid to form an activated complex, rather than by solubilizing

LIEUDATION: THE LYSOCAMAL DEGRADATION OF SPHINGOLIPIDS TAKES PLACE

BY THE SEQUENTIAL ACTION OF SPECIFIC HYDROLASES. SOME OF THESE

BY THE SEQUENTIAL ACTION OF SPECIFIC HYDROLASES. SOME OF THESE

BY THE SPHINGOLIPIDS ACTIVATOR PROTEINS (COPROPERINS) (BY SIMILARITY).

C. INDRING SAPOSIN A AND SAPOSIN C STIMULATE THE HYDROLYSIS OF

GLUCOSYLCERAMIDE BY BETA-GLUCOSYLCERAMIDASE (EC 3.2.1.45) AND

C. ALACTOSYLCERAMIDE BY BETA-GLUCOSYLCERAMIDASE (EC 3.2.1.45) AND

C. SAPOSIN-C APPAREMILY ACTS BY COMBINING WITH THE BRYTHE AND ACIDIC

LIPPID TO FORM AN ACTIVATED COMPLEX, RATHER THAN BY SOLUBILIZING
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CEREBROSIDE SULPATE BY ARYLSULFATASE A (EC 3.1.6.8), GM1
CEREBROSIDES SULFATE BY ARYLSULFATASE A (EC 3.1.6.8), GM1
GANGLIOSIDES BY BETA-GALACTOSIDASE (EC 3.2.1.23) AND
GLOBOTRIAOSYLCERANIDE BY ALPHA-CALACTOSIDASE A (EC 3.2.1.22),
SAPOSIN B FORMS A SOLUBILIZING COMPLEX WITH THE SUBSTRATES OF THE
STHINGOLIPID HYDROLASES (BY SIMILARITY).
FUNCTION: SAPOSIN D IS A SPECIFIC SPHINGOMYELIN PHOSPHODIESTERASE
ACTIVATOR (EC 3.1.4.12) (BY SIMILARITY).
                                                                                                                                                                                                                                                                                 Databourn Standard, Fri, 525 Ac. (198264; 098264; 01-805. Rel. 23, Created)
16-0CT-2001 (Rel. 40, Last sequence update)
